- Single or double sided
- Non-reflective display
- White powder-coated finish

50mm high character display

Priority colour coded messages

## SUMMARY

Utilizing low maintenance long life 50mm high LED technology, Advance Care's 14 character Annunciator is easily readable from a distance.

Messages are displayed in the industry's standard priority colours: green, yellow and red. The non-reflective screen properties eliminates glare.

The Annunciator also boasts an integrated chime unit, which has a range of powerful alert tones that are both easily audible and pleasant sounding. The chime volume is simple to adjust.

Combined colour coded display with a range of audio alerts, ensures that effective communication is available in all healthcare environments.

An integral part of the Advance Care Nurse Call System, the Annunciator is powered by the systems bus, thus providing full backup capabilities during power outages.

Being both ceiling and wall mountable, the units are streamlined and ergonomically designed. They can be installed as a single unit or in pairs, allowing the creation of dual-sided units for multi-directional access areas.

The screen's viewing angle is adjustable, providing added flexibility, and making it suitable for a wide range of installation applications
